Source elements for 5' transduced SVAs on chromosome 19

Locus name	Position	TSD	Alu-like	VNTR - number (length)	SINE-R	Subfamily	Poly-morphic state		Chimpanzee	poly A signal	length of 5'TD	source locus of 5'TD
H1_3	1:26605984 - 26608163	agtttaataatgt	+	27 (1122bp)	+	D		-	aataaaa	24	Chr.9:33761217 - 33761239	
H3_2	3:15178506 - 15180806	caaaatggcctttg	+	29 (1212bp)	+	D		-	aataaaa	30	Chr.9:33761211 - 33761239	
H10_10	10:43238007 - 43238853	aaaaatattaatctg	+	3 (112 bp)	+/only 3'part	E		-	aataaaa			
H10_3	10:73298405 - 73300291	aacatgattataatgc	+	21 (889 bp)	+	D		-	aataaaa			
H15_4	15:38761549 - 38763760	aaaataactctgatqc	+	30 (1255 bp)	+	D		-	aataaaa			

SVA elements tested in primate and human population panels are highlighted in yellow. Elements tested in primate panel only are highlighted in light blue. Abbreviations:
trunc. - truncated; het - element found almost exclusively in heterozygous state; poly - polymorphic; G - Gorilla; O - Orangutan; poly* - PCR results for element H19_39
indicate absence in chimpanzees, BLAST search using the preintegration site against the wgs database indicates presence/absence polymorphism in chimpanzees. +* -
PCR results indicate presence of element H19_20 in chimpanzees. However, this result could not be confirmed using the UCSC genome browser or BLAST against the wgs
database. Allele frequencies are given for the SVA-containing allele in case of presence/absence polymorphisms. Ethnic groups are as follows: Afr. - African; Eur. -
European; As. - Asien; SA - South American
